Keynius, we're a global company with a big vision	50

Keynius, we're on a mission.

Over the years we've shaken up the smart locking industry with our next level smart locking solutions, Now, we're taking this a step further, spearheading innovation, with our unique 'plug & play' Smart Locker Walls. With this complete solution, creating your ideal locker wall is just a matter of completing a few steps.

Keynius high quality smart locker walls are offered in wood, HPL, and metal and come in numerous color combinations, to complement your office, locker room, warehouse, store, apartment building, hotel or any other location. With a choice of extra functionalities like cooling, ventilation, power supply, the usage control that fits your organization best, and integration into other access control systems, Keynius smart locker walls are a stand-out solution for all your storage needs.

One system, multiple solutions… making locker walls smart.

Discover Keynius, the most comprehensive locker management system. Get in touch today.

sales@keynius.eu

Why smart locking?

Whether users need secure storage space for personal belongings, are looking to dispense products, conduct a sale or rental of company resources, or simply distribute packages, our unique locker management system makes it all possible at the click of a button.

Smart locker walls offer the flexibility to change their storage purpose at any time, to maximize efficiency.

Our lockers are easily accessed and managed via a secure smartphone app or online portal.

Lost keys and forgotten pin codes are a thing of the past thanks to the advanced technologies we utilize.

A locker solution for every scenario.

Secure storage

Offer your employees or visitors a very secure and user-friendly way to (temporarily) store personal belongings.

IT & Asset management

Manage access to shared resources – such as keys or tools – in a safe and controlled manner.

Parcel management

With a Drop off & Pick up solution – such as package lockers – products can be transferred from one person (or company) to another without supervision.

Click & Collect

Controlled and secure dispensing of products and goods. For example, prepare medication for collection, or dispense one-time company resources.

Vending solutions

Our locking solutions for vending and rental allow you to sell or rent products – such as machines, office supplies, or consumer items – to employees, visitors, clients and passers-by. One can pay on the spot via debit card or online.

Visitor lockers

With our event locking solution, you can provide visitors secure storage with a locker system that can be very easily operated online via your own locker website.

Extra functionalities

Expand your locker system with heated or cooled lockers, choose outdoor lockers for all weather conditions, manage the stock of items in your lockers, link payment terminals or scanners, or equip your lockers with charging functions and sensors. The possibilities are endless!

Why go ‘Smart’ with Keynius?

Our smart locker walls offer many features and benefits

Easy to control and configure.

Our innovative and extremely flexible Keynius Solution turns any locker system into the perfect solution for your situation, environment and applications. A unique, plug & play cloud application, without software maintenance and management costs, that will provide you with the robust reliability and security that you expect.

Compared to other smart locking systems on the market, Keynius offers several unique features which sets it significantly apart.

Control

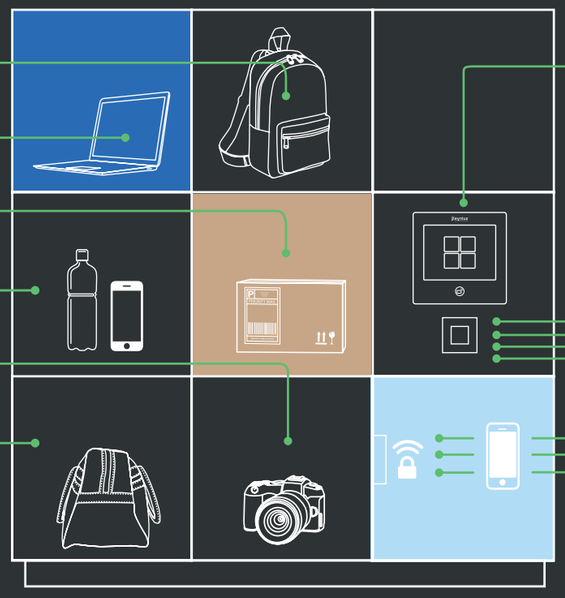

It is the only system that offers the possibility to program every locker individually (e.g. to function as an employee locker, an IT asset locker, or a parcel locker), to make access possible with multiple controls (e.g. a company card + app + pin code) and have a mechanical override in case of a power shutdown.

Configure

Locker management can be done via PC/laptop/tablet/mobile/ touch screen, offering easy setting options and reporting. With it's QR scanning capabilities, the rental solution is ideal for temporary locker rental at schools, sports and event venues, and amusement parks. On top of this, Keynius offers the 'Keynius Payment' system, which handles all locker rental transactions, making it a one-stop shop for you.

KEYNIUS LOCKER CONFIGURATIONS

- Visitor Locker
- IT & Asset Locker
- Click & Collect Locker
- Personal Locker
- Team Locker
- Employee Day Locker

KEYNIUS SMART LOCKING CONTROL

- Touch screen (Smarty)
- QR/Barcode
- Fingerprint
- Pay
- Key card (RFID/NFC)
- App (Mobile/Tablet)
- Online (Mobile/Tablet)

Software.

Easy and intuitive

Keynius does not require an expensive server or complicated installation. It is a cloud solution, so a standard internet connection is sufficient to manage your locker solution. Users reserve and use their lockers easily via the app, online or via the terminal.

Cloud software

Keynius is a cloud solution that runs on a (highly secure) Microsoft Azure platform. The maintenance and updating of the server and software are fully outsourced and guaranteed, ensuring that all user data is highly secured.

Any kind of use

Keynius allows you to easily configure your lockers for any type of use: with permanently assigned or flexible lockers, known or anonymous users, payment options and inventory management of the products.

Keynius app

With the Keynius smartphone app (Android and iOS), users can easily reserve, operate and pay for their lockers. Reserving and/or collecting company assets (equipment, clothing, keys) is very easy with the app.

API links

Using an API data connection, you can easily integrate with your own user management software. Standard APIs are available for commonly used applications, and custom APIs can be created.

Online management

Administrators have full control over the settings and use of the lockers via the Keynius online platform. It is easy arrange matters such as rental administration, asset management and inventory management of locker products.

Management reporting.

The Keynius online platform gives you quick and easy insight into the use of your lockers and allows you to view and download reports yourself, incorporating historical or real-time data. Using an API data connection with your own (user) management software, you can integrate and easily handle user management. Standard APIs are available for commonly used applications, and custom APIs can be created.

Use case.

Aesthetically pleasing, versatile and easy-to-use, our Smart Locker Walls consistently add value in all types of surroundings.

TerGooi MC, Hilversum (NL)

A hybrid solution with central wardrobe connected smart lockers and battery operated smart lockers allows flexible access for staff. This is managed by a single platform, the Keynius Manager App.

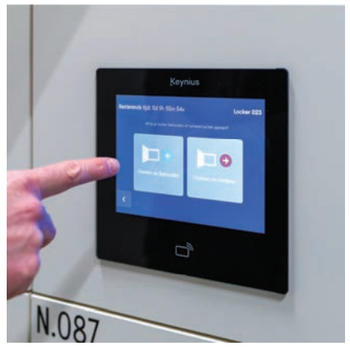

Reuse and recycling.

To encourage the reuse and recycling of our products, we ensure that our smart lockers are made from 100% recyclable steel and separate components that can be easily recycled after disassembly.

We also retrieve products that reach the end of their lifespan for upkeep and further use.

Our products are excellent quality and come with an extensive warranty period and guaranteed long-term delivery of replacement parts, creating a minimal waste solution. The waste we process is done in separate streams, to ensure that we recycle as much as possible.

For the production of the wooden lockers, 100% circular wood is used, of which at least 90% is recovered wood.

The remaining 10% consists of for example residual streams from the wood industry.

Material: UNILIN
Project: Flamish Gouvernment

Sustainability.

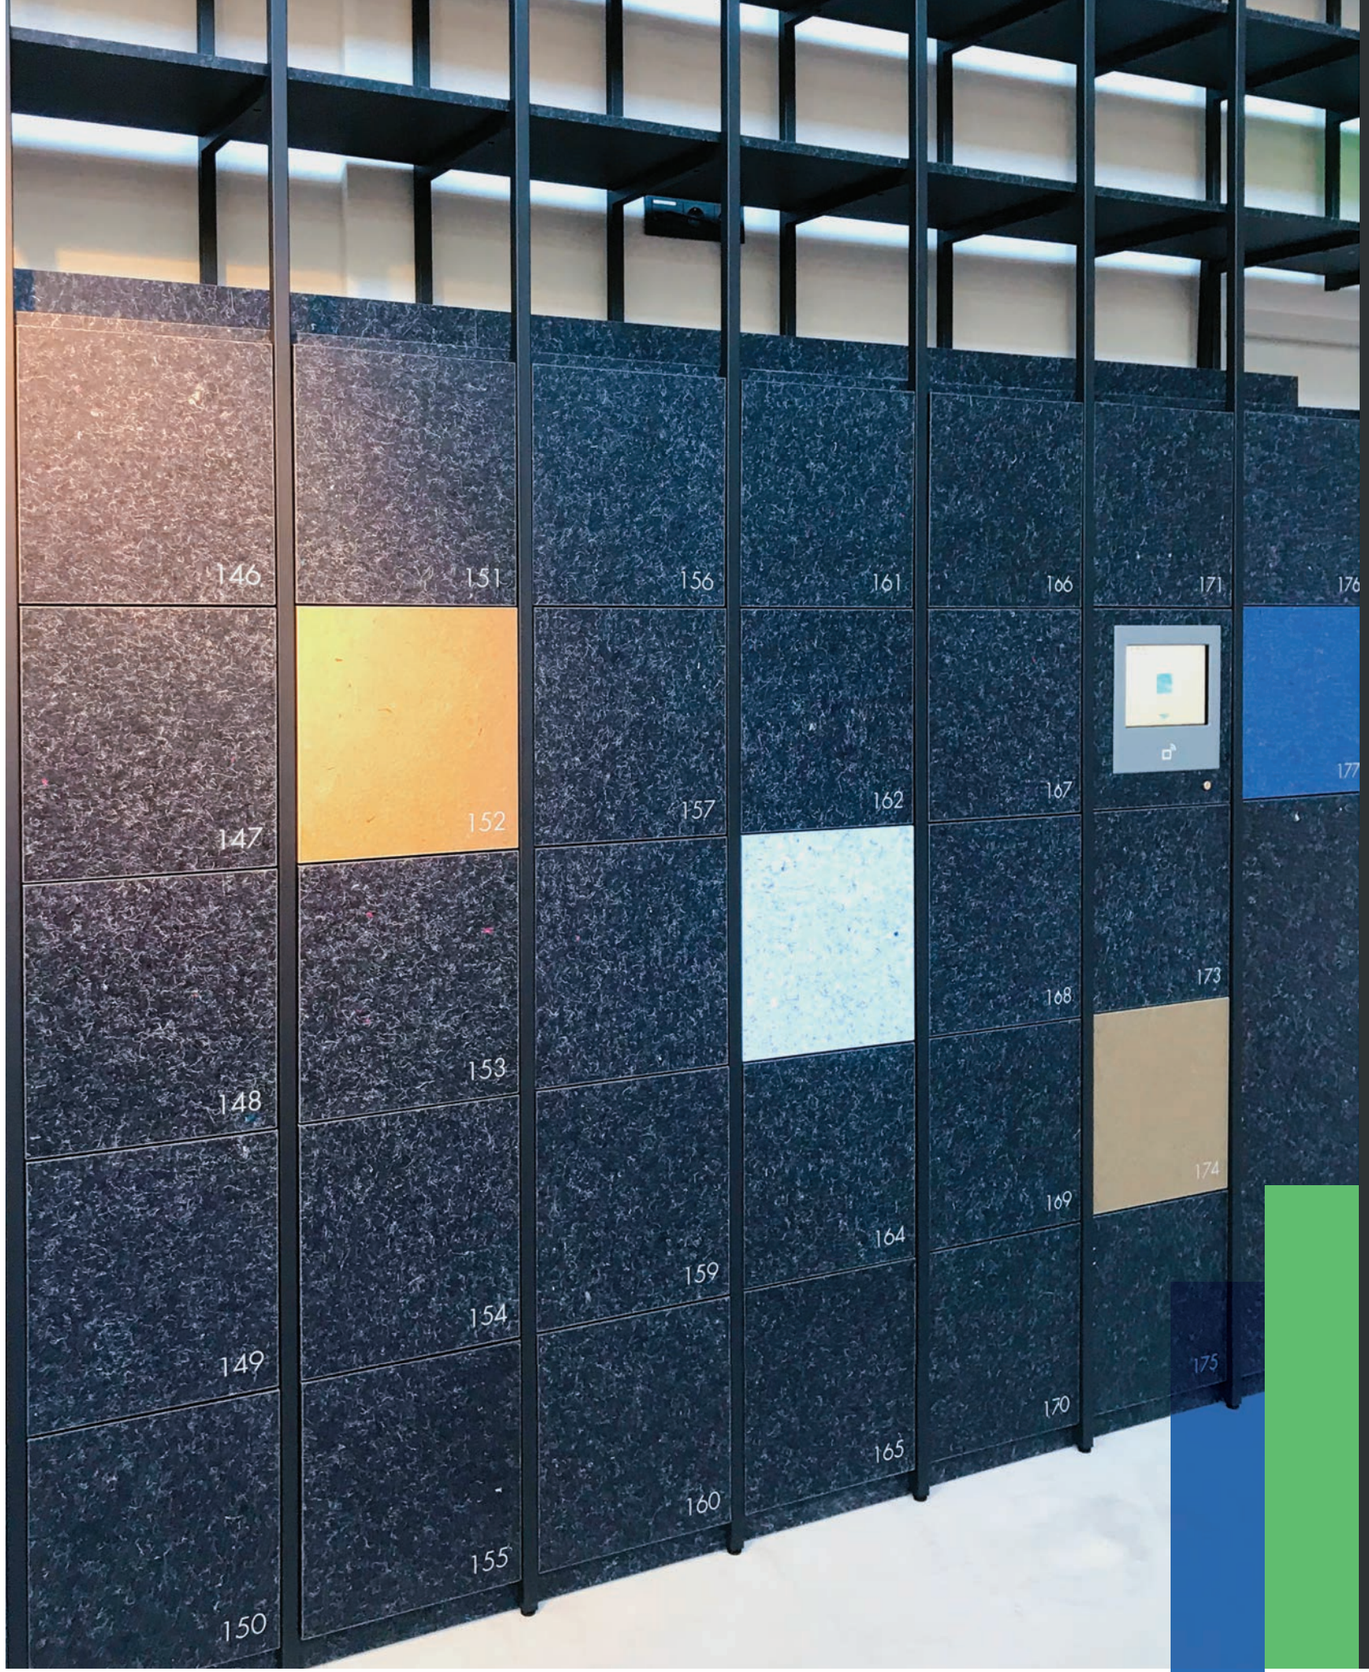

We are passionate about leaving the world a better, safer place for future generations. Sustainability is an important part of our ethos and integrated into the development of everything we do.

How we operate sustainably

We ensure a high-quality and reusable locking solution that contributes to sustainability by creating products that focus on use instead of ownership, on static convenience instead of transport and delivery, and on the adoption of environmentally durable and conscious materials.

ISO quality and environmental management system

Keynius is ISO certified, which means that we are officially recognised as meeting the utmost high-quality standards of process safety and quality management cf. ISO 9001 and Environmental Management System ISO 14001. In addition to this, Keynius is ISO 27001 certified for Information Security.

Rezign®.

Together, Keynius and Rezign® are working together to unlock a sustainable future.

At Keynius, we believe our products shouldn't come at the expense of our planet. That's why we're proud to partner with Rezign®, a pioneering sustainable furniture brand. Rezign® breathes new life into waste materials, transforming discarded textiles and wood scraps into beautiful and functional furniture.

Through this collaboration, we're committed to:

- **Sourcing Eco-Friendly Materials:** Rezign®'s expertise in sustainable materials helps us identify and integrate environmentally responsible options throughout our smart locker solutions.
- **Responsible Manufacturing:** We work with Rezign® to implement best practices throughout our manufacturing processes, reducing waste and energy consumption, mirroring their commitment to a circular economy.
- **Transparent Supply Chain:** Collaboration with Rezign® allows for greater transparency in our supply chain, ensuring responsible sourcing and ethical production practices.

This partnership reflects Keynius' dedication to a greener future. By working with Rezign®, we can offer our customers not only industry-leading security solutions but also the peace of mind that comes with knowing their choice is environmentally responsible.

Use case.

CBRE, Amsterdam (NL)

Circular and modular smart lockers opened electronically with personal access pass or badge for employees to securely store personal belongings. Made from recycled textiles through Keynius's partnership with Planq.

Keynius, we're a global company with a big vision.

- Keynius designs, develops and produces smart locking solutions
- We produce and manufacture componentry and fully integrated smart locker walls
- We control the entire supply chain across the manufacturing process
- We have our own proprietary smart locking technology platform
- We own the IP for all our smart locking technologies
- Our technology integrates with a wide range of systems
- Our payments platform enables pay-per-use of our smart locker wall systems
- We have our own R&D and product development team in-house
- We put sustainability at the heart of our production and supply chain process
- We have over 100 strategic sales and distribution partners globally

We deliver projects globally

- We have a sales and manufacturing presence across five continents
- Over 100 strategic and reseller partners worldwide
- Through LAAS Invest we have global funding and financing

Our partners are the extension of our ambitions and vision in the regions where they know the market and customers best. And just like us, they greatly value quality, safety, professionalism and innovation.

Operations & manufacturing hubs

Strategic distribution partners and resellers

Use cases.

Our Smart Locker Walls are an efficient and versatile solution for any industry.

Duvel Beer, Moortgat (BE)

Duvel Moortgat Brewery enhanced its staff changing rooms with advanced locker solutions.
The integration of RFID technology offers employees a seamless experience.

Pharmacy Dronryp, Dronryp (NL)

Dronryp, Secure, 24/7 accessible electronic lockers, tailored for both small and large prescriptions, ensure a smooth, efficient, and safe medication pickup experience.

Use cases.

Our Smart Locker Walls are an efficient and versatile solution for any industry.

SNCF, Paris (FR)

Smart Locker Walls for luggage lockers were installed to maximise space in stations and to ensure that travellers have a safe place to store their belongings, allowing them to explore the city unencumbered.

FootAsylum (UK)

Smart Locker Walls were installed in the retail outlet chain, allowing customers to conveniently collect their online orders from the secure lockers, at their convenience, avoiding the need to wait for home delivery.

Keynius is an innovative locker solutions provider for smart locker walls, globally.
