

Smart Storage for Future-Ready Workplaces

Office relocations, renovations, and workplace transformations require decisions that impact operations for years. Keynius supports architects and specifiers with smart locker systems that integrate seamlessly into modern workplace designs, technology stacks, and long-term space strategies.

Smart Storage Starts at the Specification Stage

Smart Lockers for an Agile Banking Workforce

How a UK bank deployed 2,000 smart lockers across 5 floors to give 10,000 employees secure, flexible storage.

UNITED KINGDOM

Storage is often treated as a late-stage commodity rather than a designed system. This results in fragmented locker solutions, poor integration with workplace technology, and avoidable complexity for clients once buildings are occupied.

When storage is specified too late, issues surface after handover. Lockers don't align with access systems, hybrid workflows break down, and facilities teams inherit manual processes that undermine otherwise smart environments.

Rectifying this later adds cost and risk.

Keynius enables specifiers to design smart storage into workplace projects from the outset. Locker systems integrate with leading smart office platforms, access control, and IT standards, allowing storage to function as part of a cohesive, future-ready ecosystem.

The result is a workspace where storage supports workflows, technology, and flexibility, reducing project risk and delivering long-term value for end clients.

Redefining Workplace Storage for a Global Airline

How Air France-KLM deployed 2,200 branded smart lockers to support 20,000+ weekly uses across Europe.

ACROSS EUROPE

Smart Storage as a Design Component

Treat lockers as part of the workplace system, not an afterthought—supporting hybrid work, shared desks, and evolving space requirements.

Flexible Locker Configurations

Specify day lockers, assigned lockers, or mixed-use setups within one system.

Scalable Across Sites and Phases

Design once and roll out consistently across floors, buildings, or regions.

Integrated With the Smart Office Stack

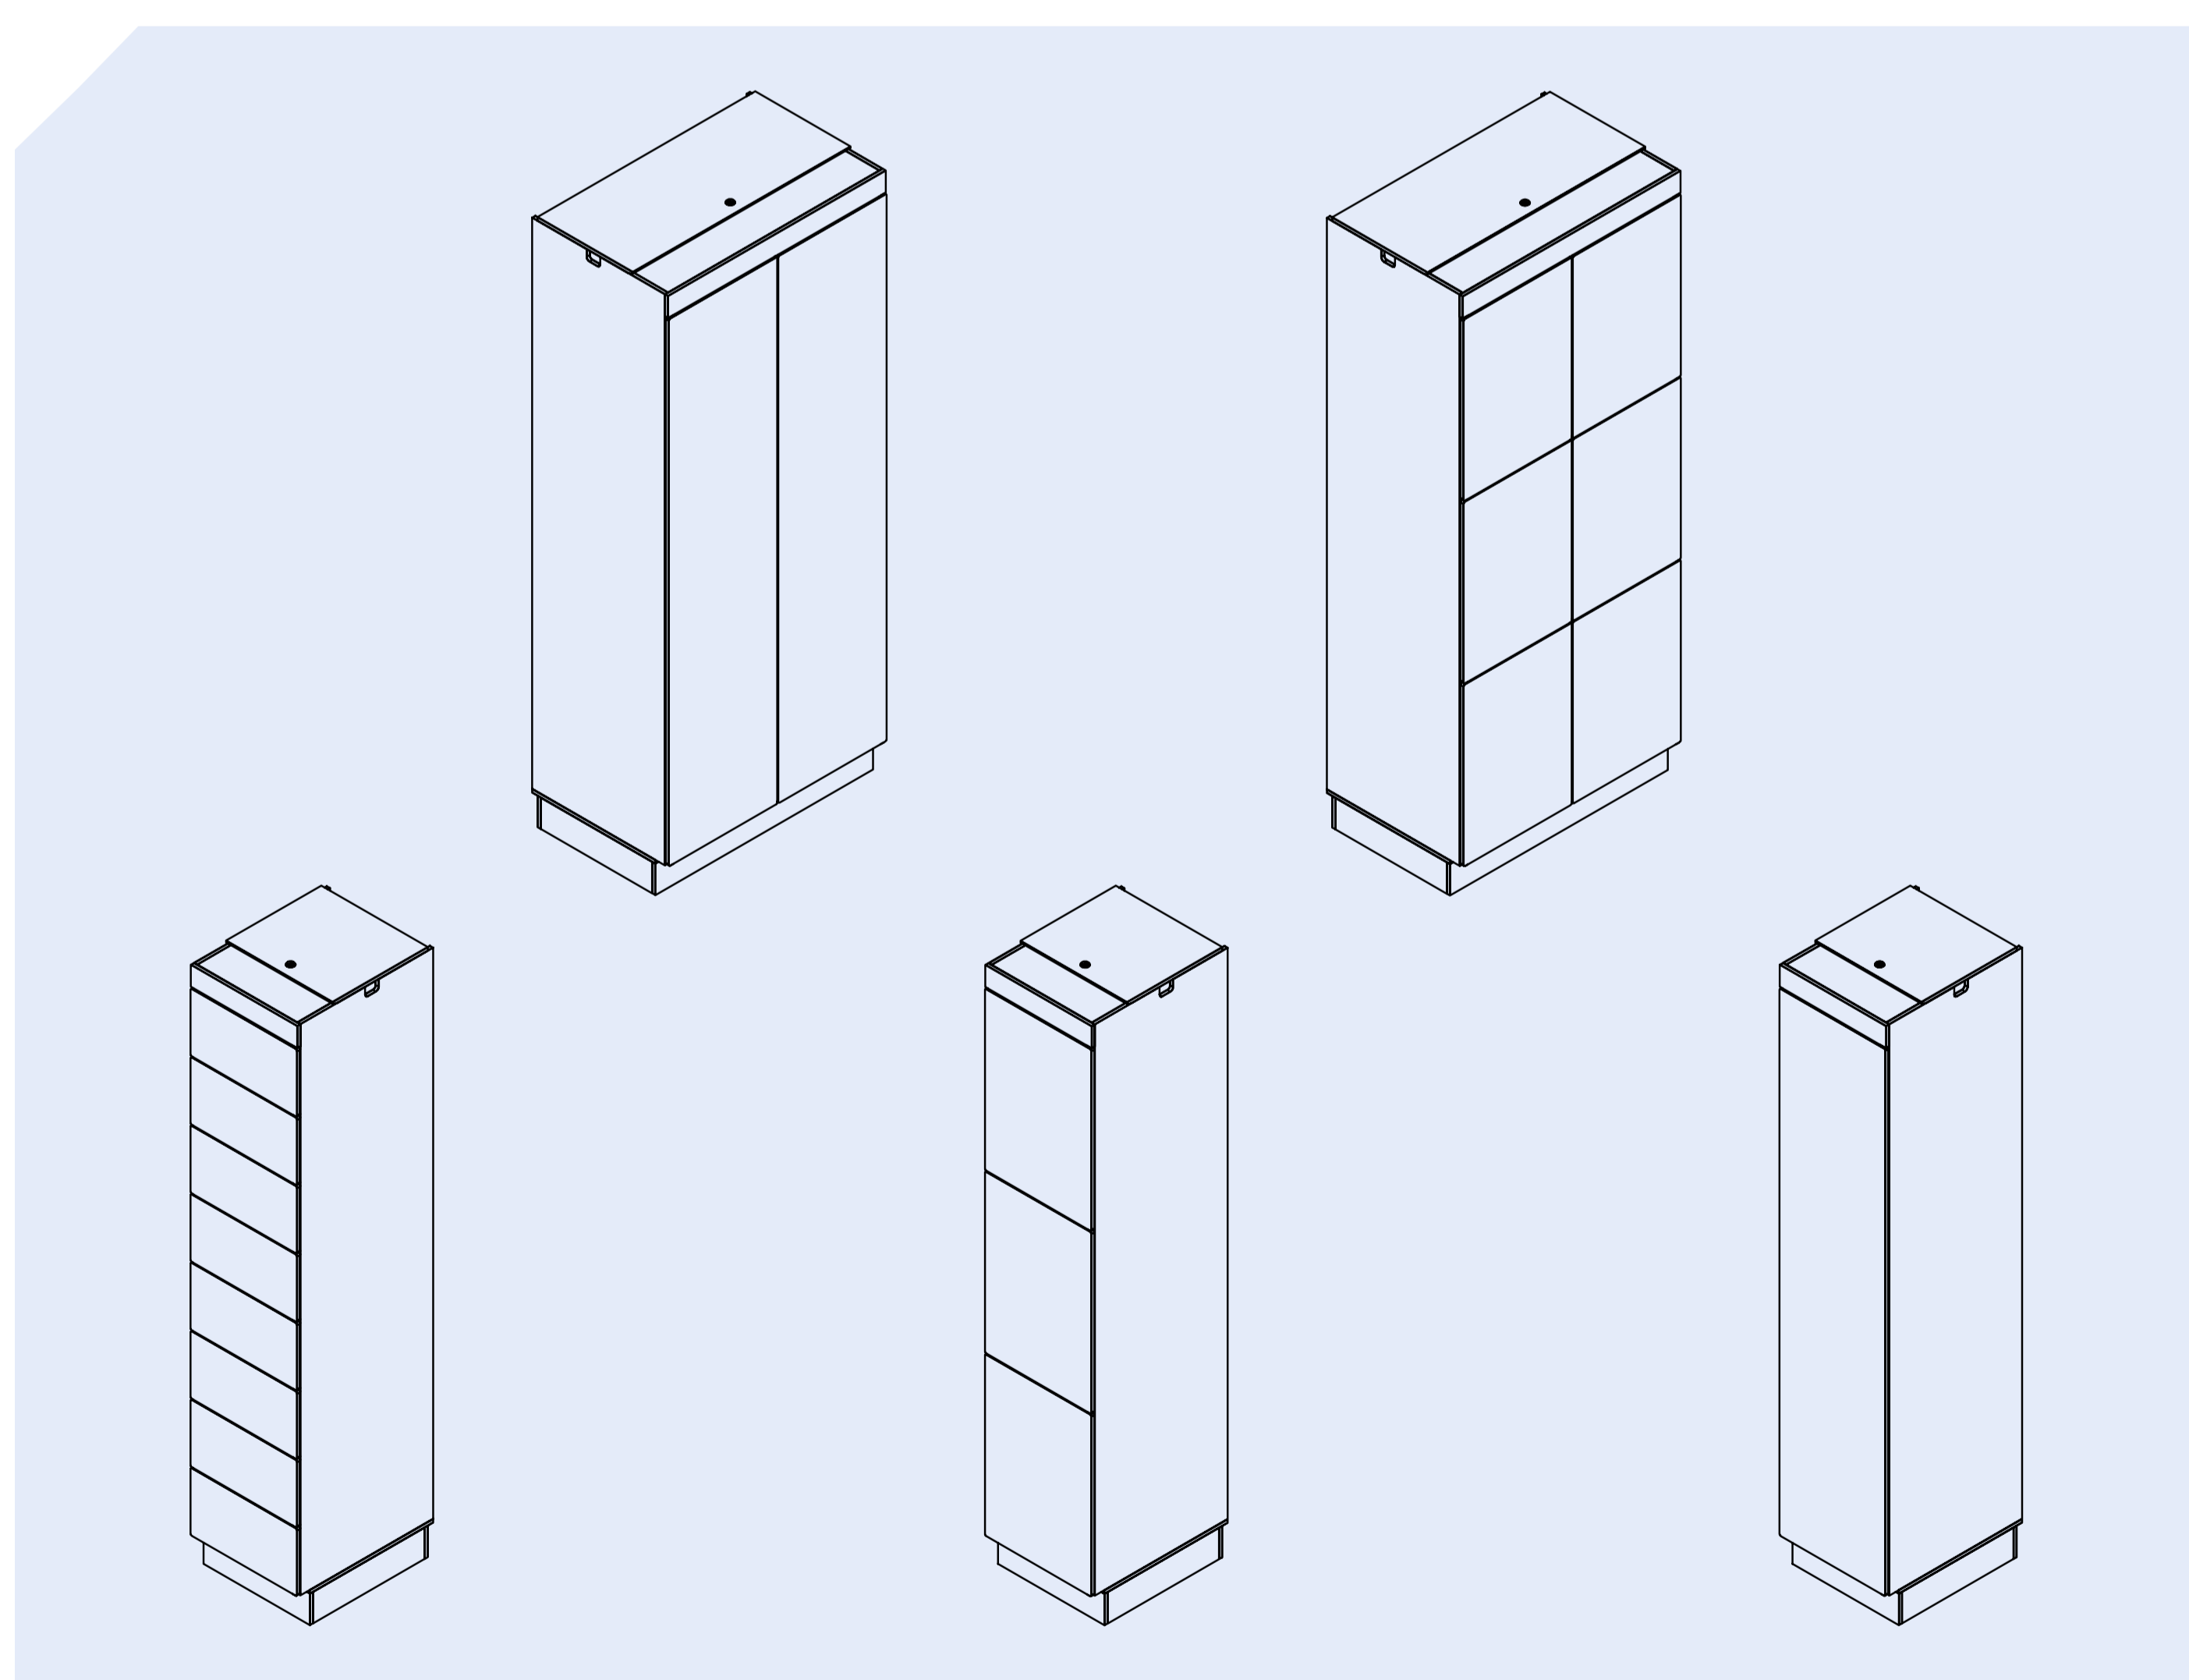

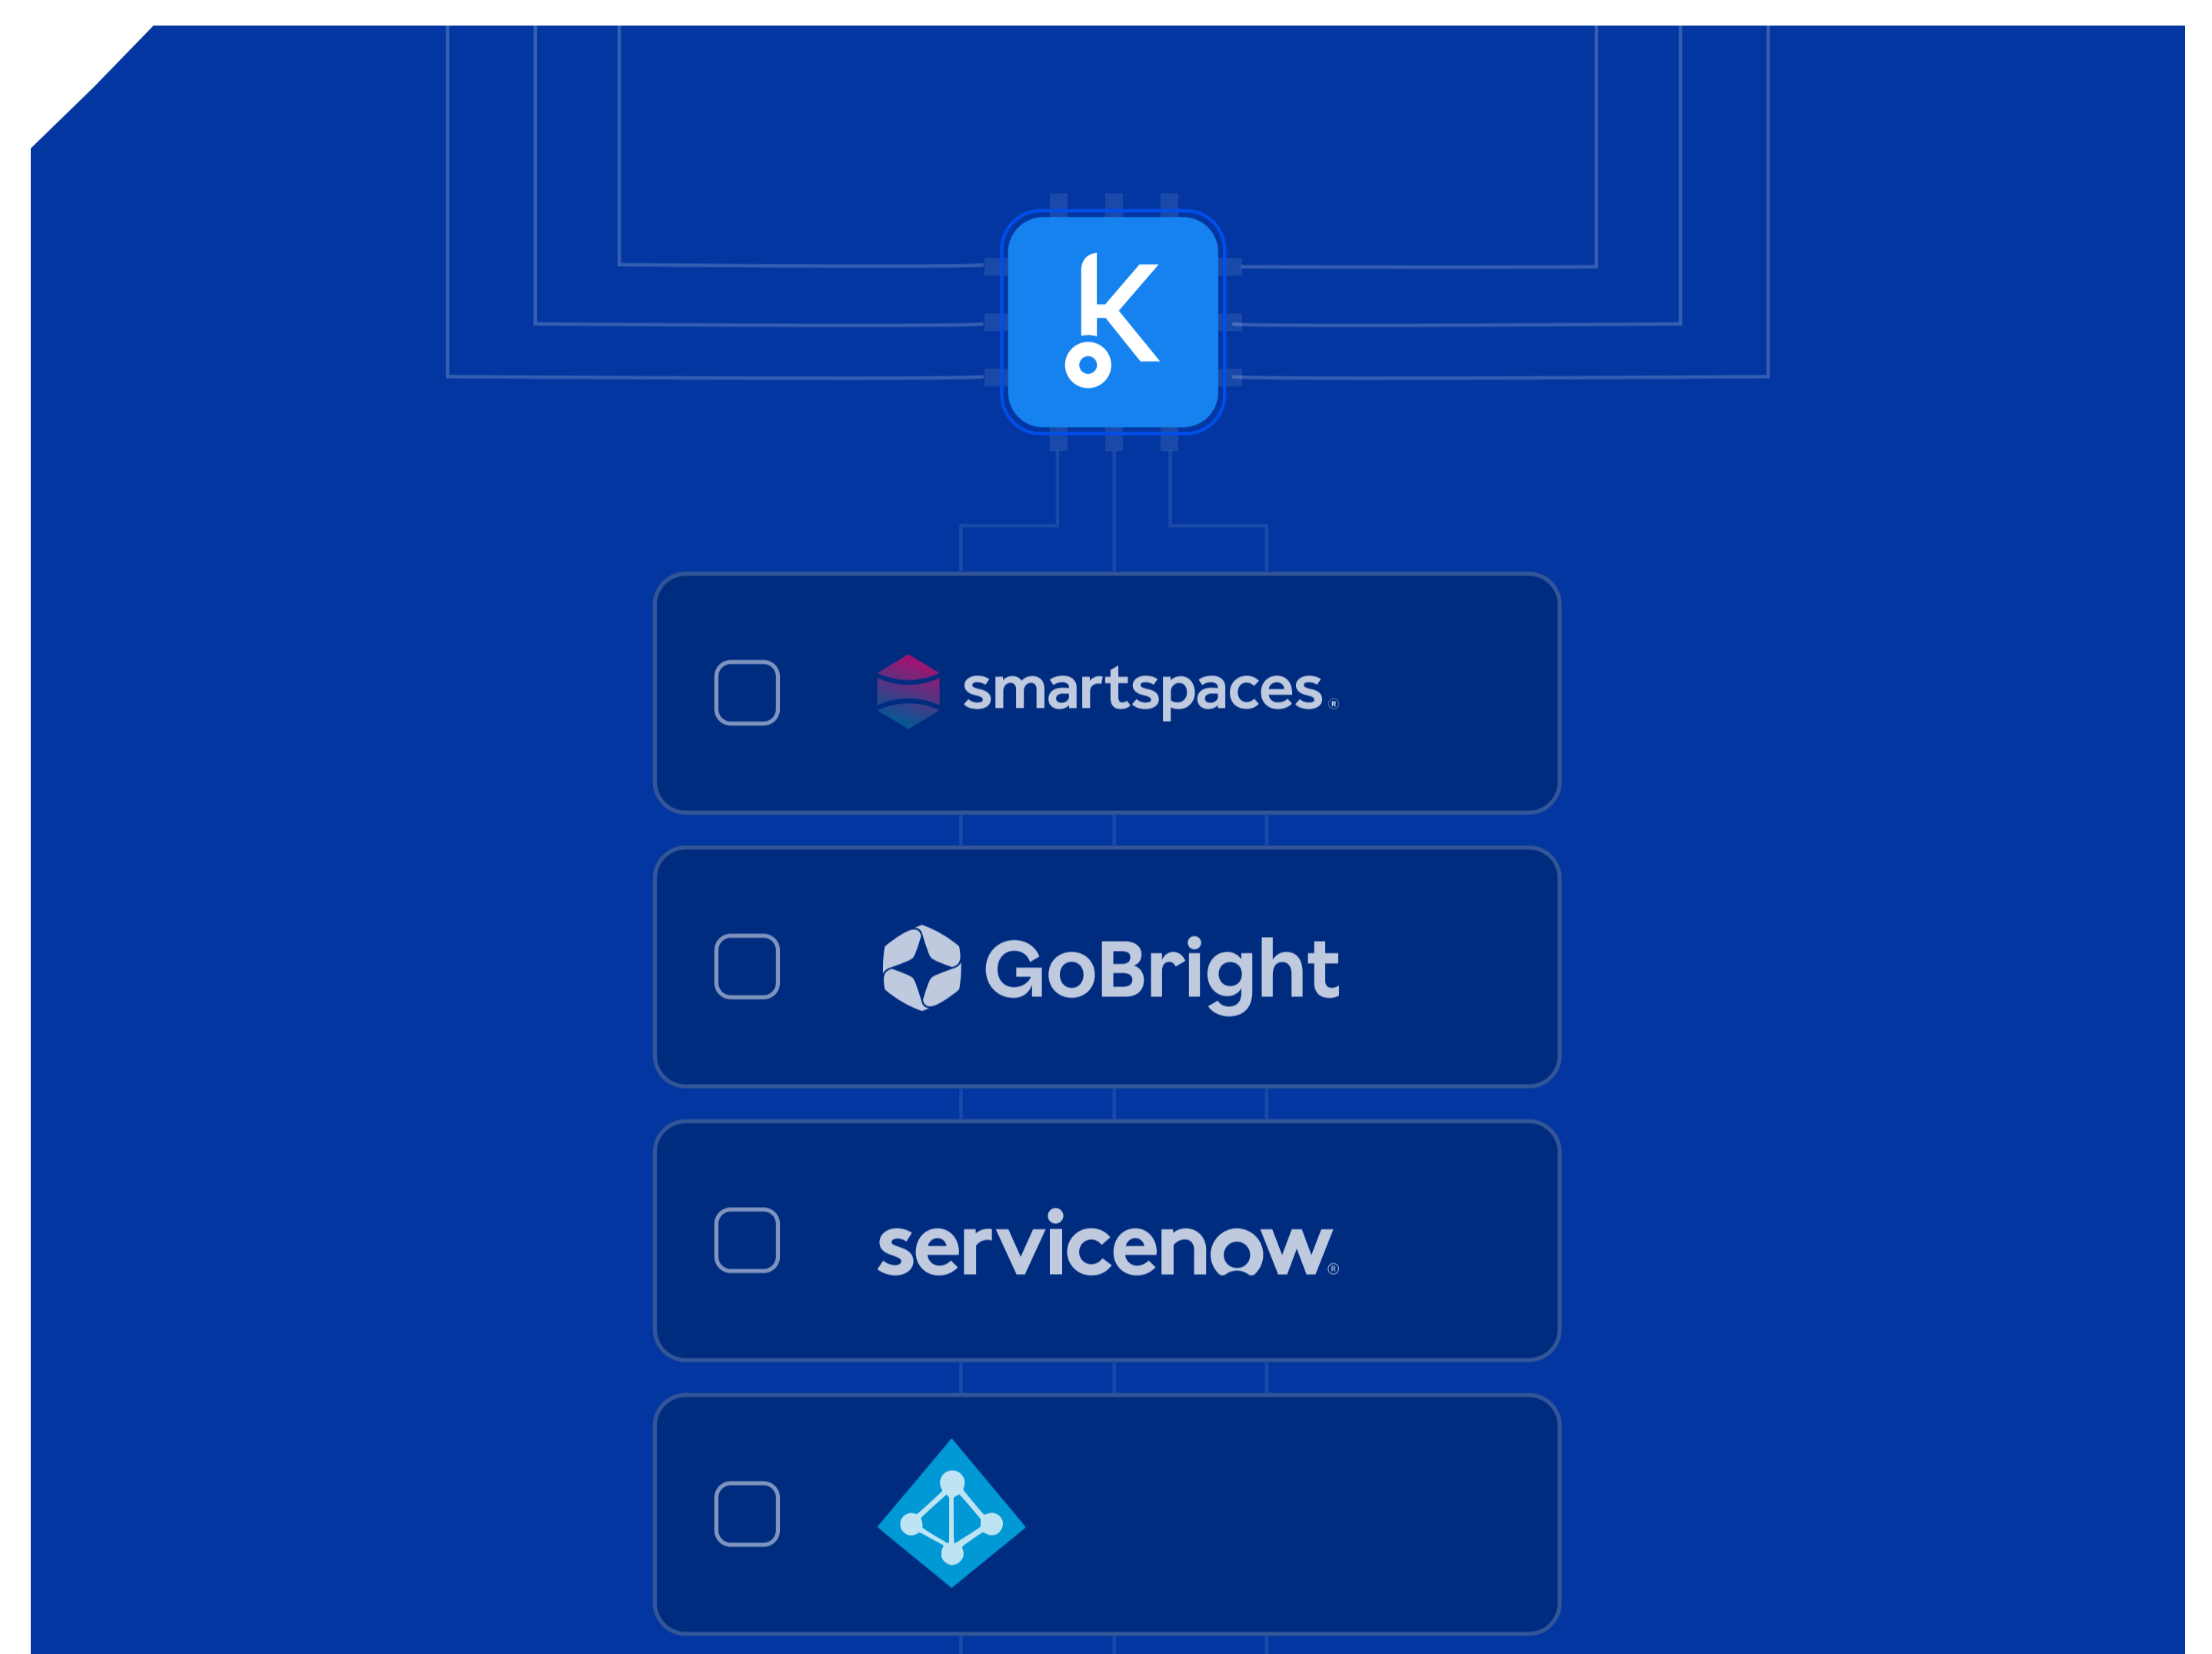

Ensure storage integrates with access control, desk booking, and workplace platforms to form a unified smart ecosystem.

Open APIs and Proven Integrations

Connect lockers with leading smart office and access technologies.

IT and Security-Ready Architecture

Align with enterprise IT, security, and compliance requirements.

Reduced Project Risk and Complexity

Simplify specification and delivery with one storage platform that adapts to multiple use cases and future change.

Revit/BIM and Specification Support

Access design files and standards to support early-stage planning.

One Platform, Multiple Workflows

Support staff lockers, IT storage, visitors, and parcels in one system.

Design Smarter Workplaces, From Day One

Explore how Keynium supports architects and specifiers in delivering modern, smart-activated corporate workspaces.
