

# Secure Asset and Evidence Storage for Police

Police services manage sensitive assets where security, traceability, and chain of custody are critical. Keynius delivers smart locker systems designed for evidence, equipment, and controlled items—ensuring secure deposit, authorized checkout, and full accountability at every step.

## Chain of Custody Without Compromise

### Centralized RFID Locker Access for Brussels Police Department

This busy police station improved their storage workflows with one badge and central rights.

 BELGIUM

Police operations rely on strict control of evidence, equipment, and sensitive materials to maintain integrity, safety, and legal compliance.

But when these important items rely on manual handovers, shared rooms, or fragmented systems, they have no traceability and create risk.

Manual processes slow operations, increase administrative burden, and expose departments to security, compliance, and legal challenges—especially across shifts and locations.

Keynius provides smart lockers designed for police services, supporting secure deposit and checkout through identity-based access. Dual-sided locker configurations allow items to be deposited from restricted zones and retrieved separately by authorized personnel, with every action logged centrally.

The result is a secure, auditable storage infrastructure that protects chain of custody, improves operational efficiency, and reduces risk without slowing police work.

## Controlled Evidence and Asset Handling

Manage evidence, seized items, and operational equipment in secure lockers that enforce controlled access and responsibility.

### Two-Step User Authentication

Users first enter a PIN, followed by an RFID badge for advanced security measures.

### Logged Chain of Custody

All deposits and withdrawals are recorded automatically for audit and review.

## Secure Deposit and Separate Checkout

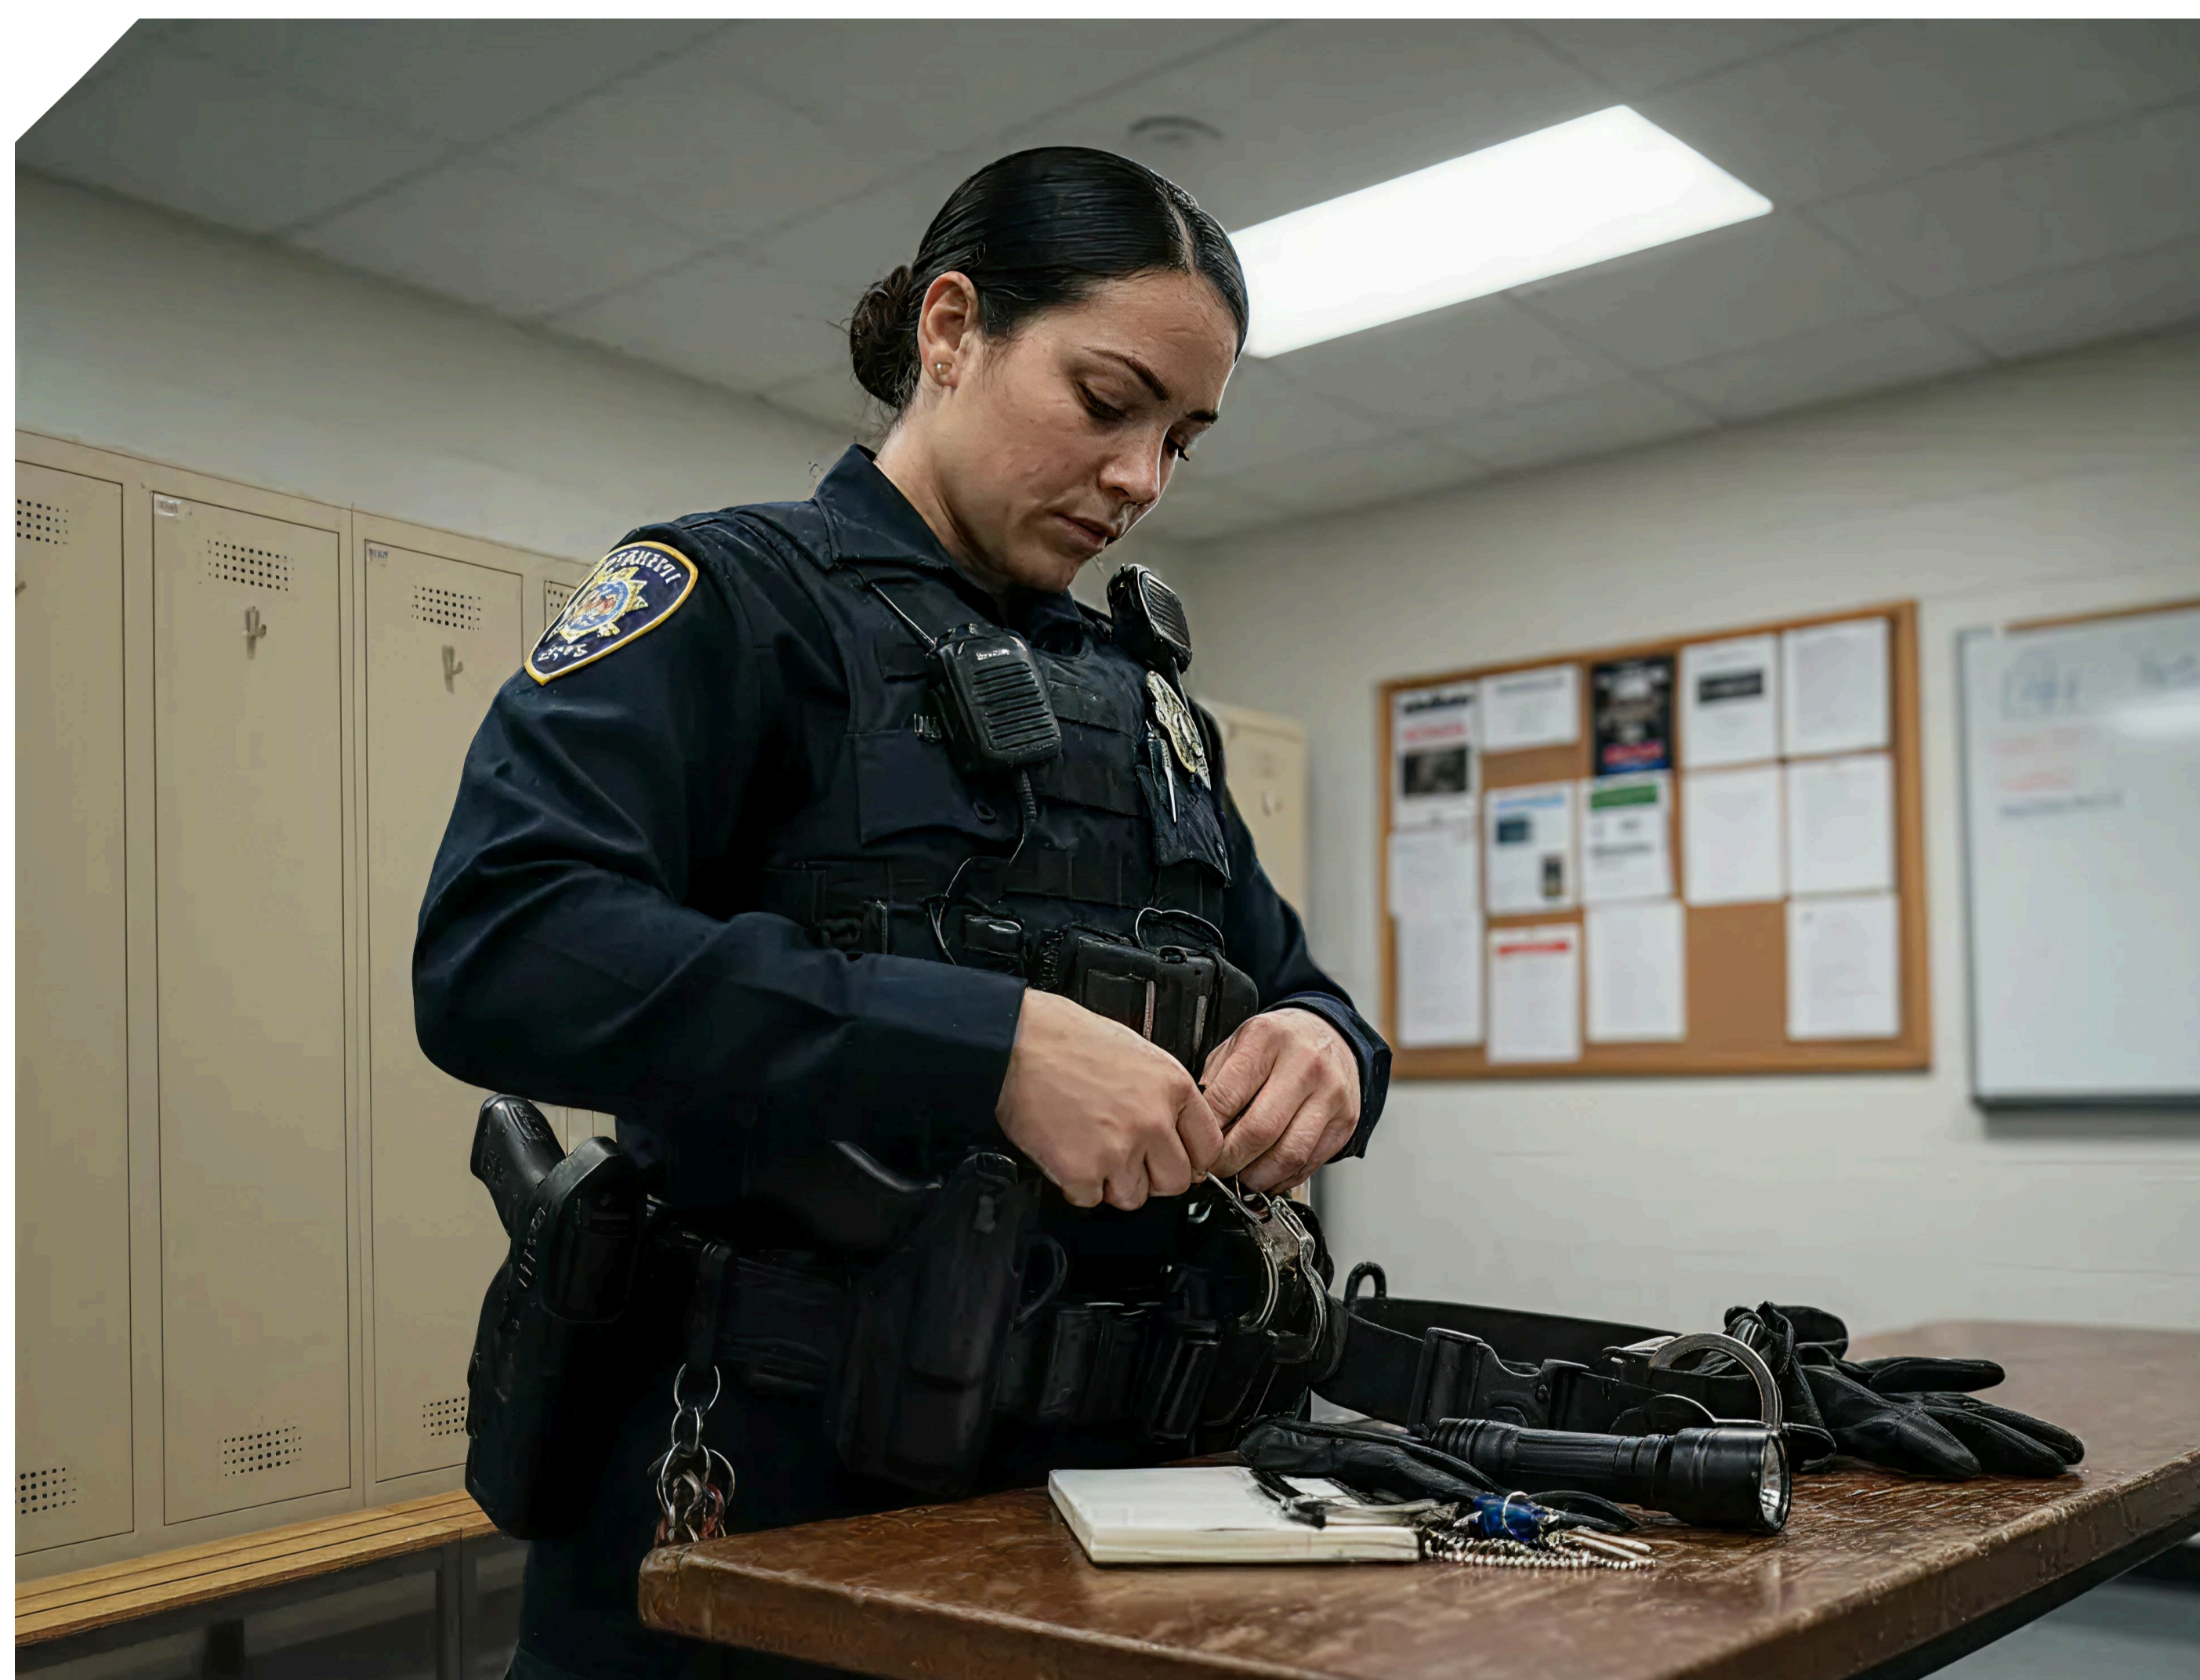

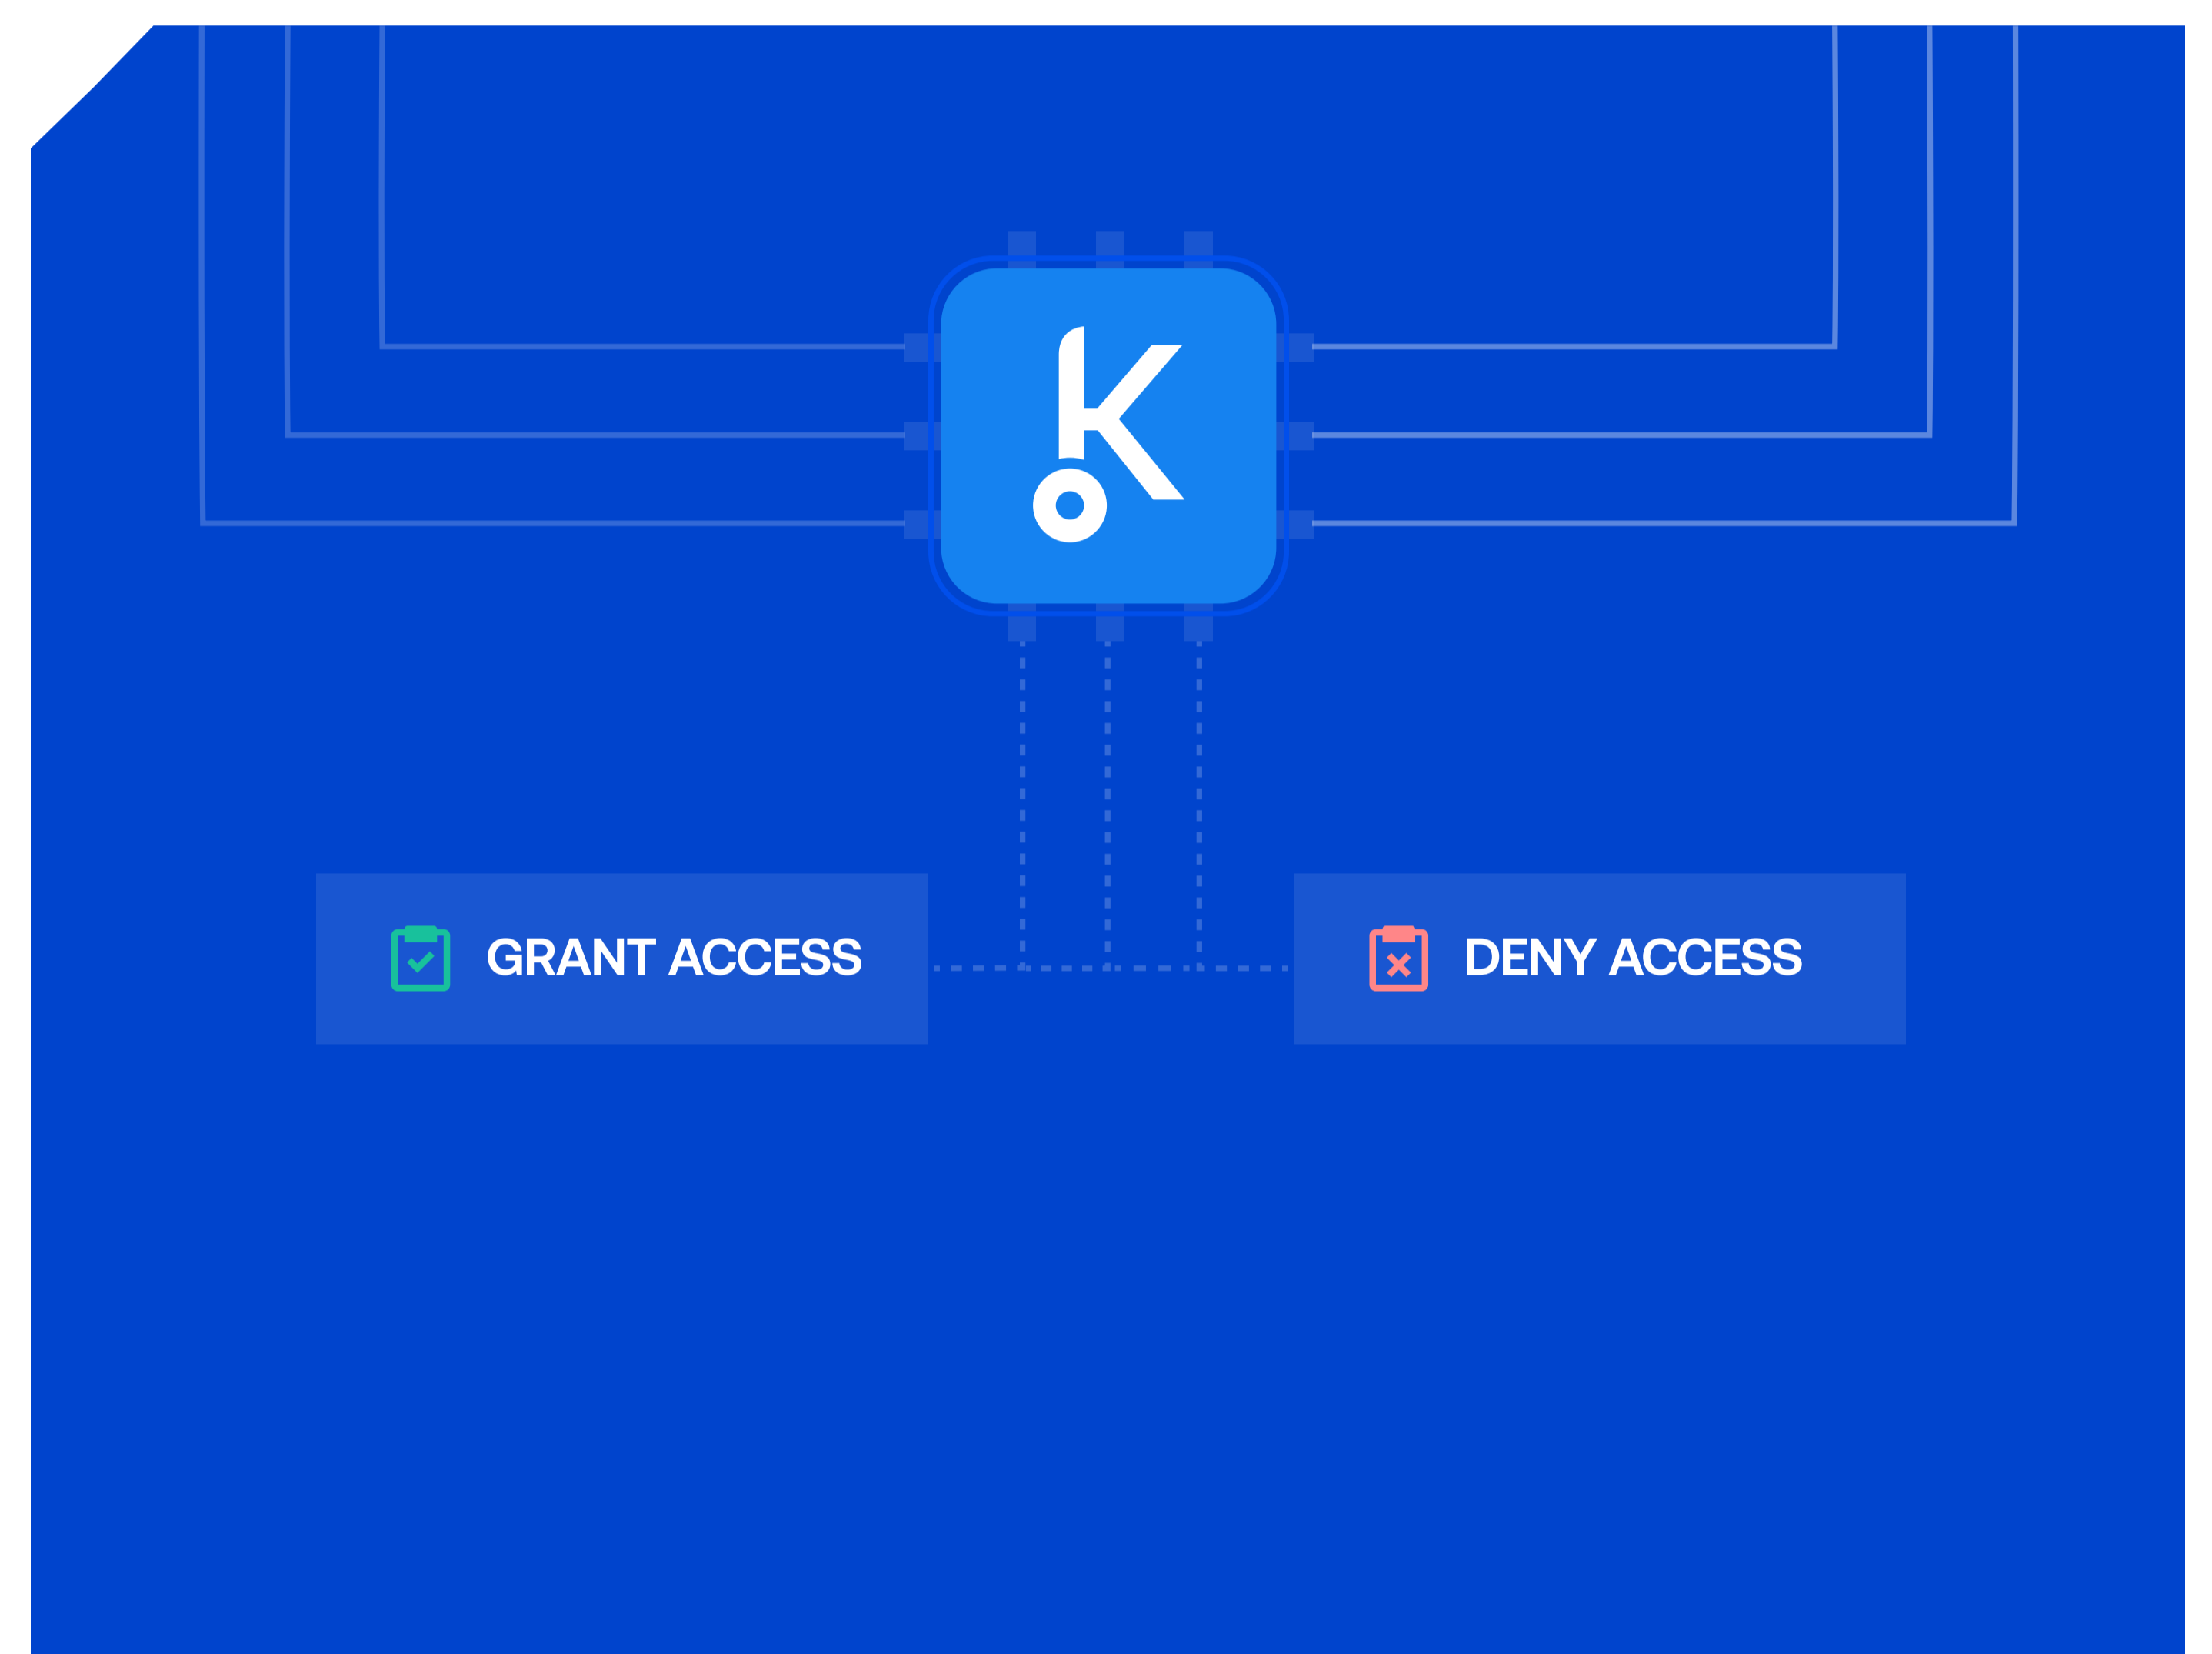

Separate the intake of sensitive items from their release using locker systems accessible from different secure zones.

### Dual-Sided Locker Access

Items are deposited from restricted areas and retrieved from authorized zones.

### Role-Based Permissions

Access rights differ for depositing, retrieving, and supervising assets.

## Plus, More Storage Improvements

Whether you need lockers for weapons, change rooms, or office use, we have solutions built for your police force.

### Multi-Purpose Configuration

Configure one locker wall to handle multiple use cases.

### One Platform to Manage Everything

Our all-in-one Keynium Portal makes it easy to manage, update, and control every single locker and user from one place. Complete with real-time updates.

## Protect Chain of Custody with Smart Storage

Discover how Keynium helps police services secure evidence and assets with full accountability and operational confidence.
