

# Smart Storage for Healthcare Environments

Healthcare environments require secure access to personal belongings, medical equipment, and controlled supplies. Keynius delivers smart lockers for staff storage, vending, and dispensing—supporting full traceability, hygiene standards, and efficient workflows without increasing administrative burden.

## Controlled Access for Clinical Workflows

### Redefining Staff Lockers for a New Hospital Era

How one hospital modernized staff changing rooms with 2,200 smart lockers serving 2,600 employees.

Hospitals and care facilities run nonstop, and staff need constant access to equipment, medication, and secure personal storage across shift changes.

Traditional rooms, carts, and cabinets rely on keys, manual logs, or open access. This leads to delays, weak traceability, and limited control over drugs, devices, and equipment.

As workloads rise, these gaps become operational risks: staff lose time finding supplies, accountability weakens, and hygiene issues grow in crowded changing and storage areas.

Keynius replaces fragmented storage with smart lockers for personal storage, controlled vending, and secure dispensing. Identity-based access controls and logs every transaction centrally, giving administrators full oversight in one cloud platform.

The result is faster workflows, stronger accountability, and scalable security for modern healthcare operations without disrupting patient care.

### Unlocking Clarity in Changing Rooms

How smart lockers brought structure, visibility, and smoother peak-hour flow to busy changing rooms.

## Secure Storage for Staff and Equipment

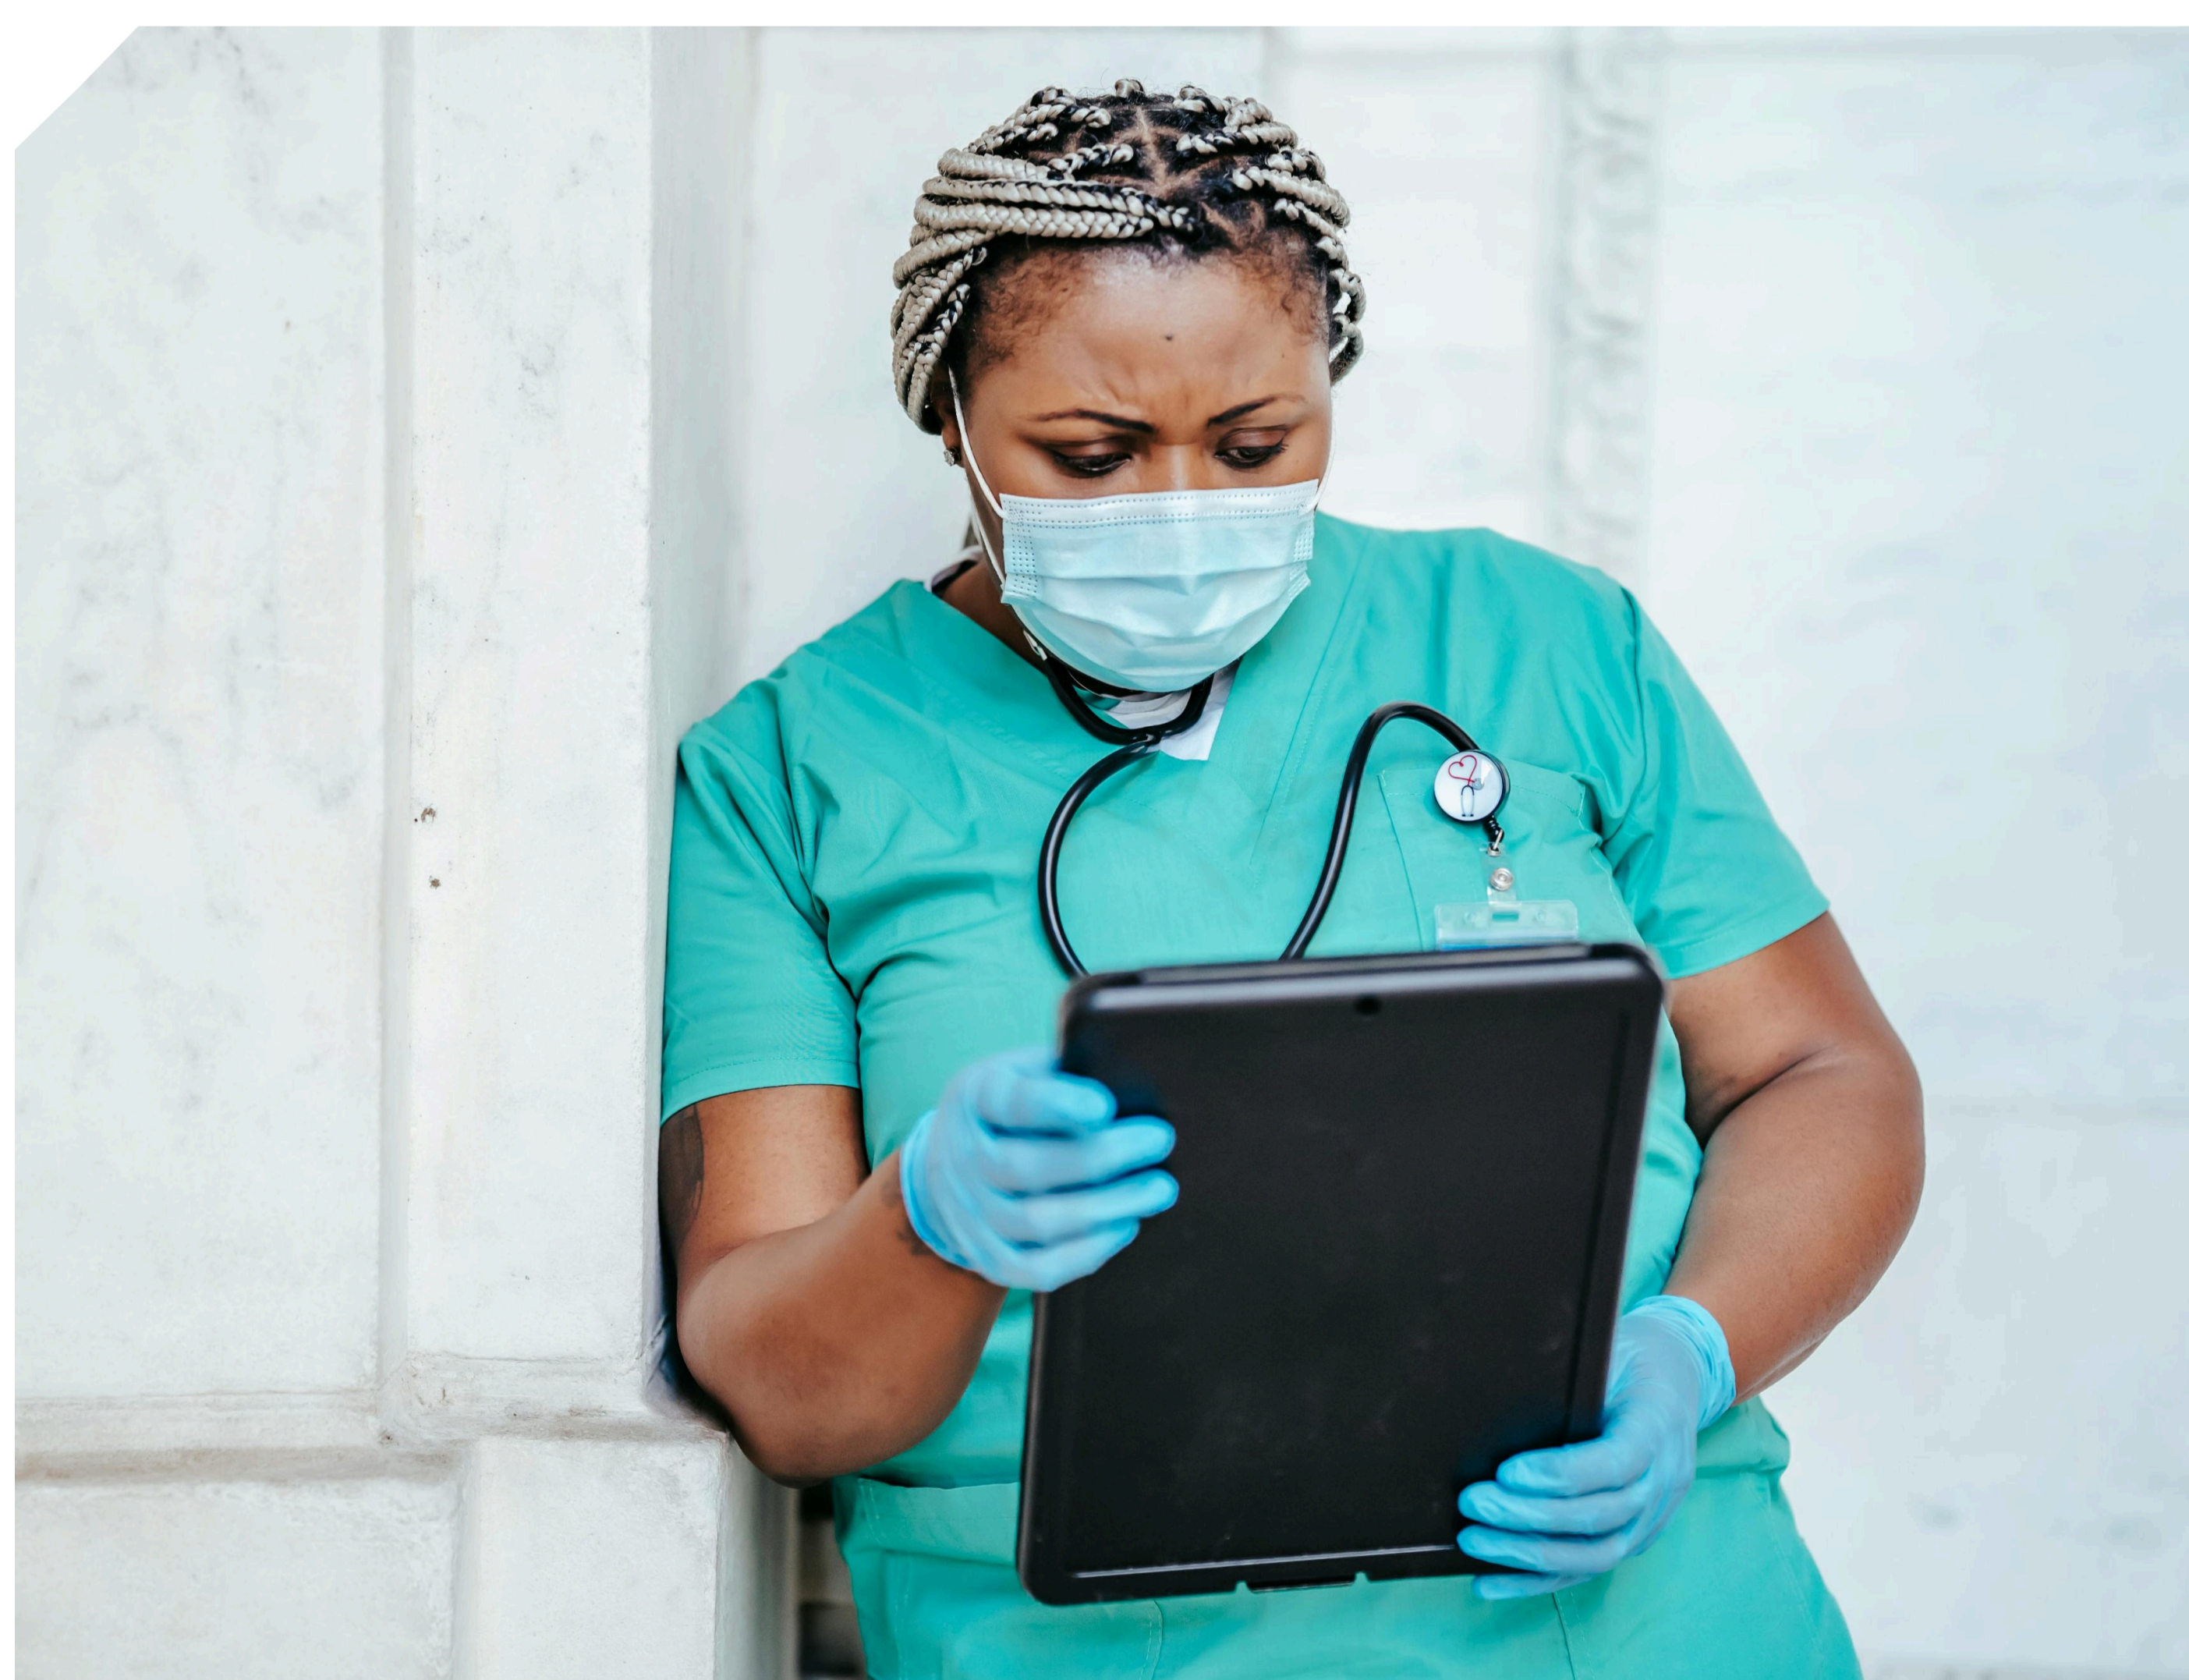

Provide controlled storage for personal items, medical devices, and shared equipment without relying on manual handovers or keys.

-  **Badge, App, or PIN Access**  
Staff access lockers using familiar credentials, eliminating lost keys.
-  **Flexible and On-Demand Use**  
Lockers adapt to rotating shifts and shared staff environments.

## Controlled Vending and Dispensing

Dispense drugs, devices, and consumables securely through smart lockers with full audit trails and identity-based access.

-  **Logged Usage and Audit Trails**  
Track when items are issued and returned for accountability.
-  **Controlled Access Zones**  
Restrict access to sensitive or clean storage areas.

## Efficient Operations Across Shifts

Manage staff lockers, vending, and dispensing centrally with real-time visibility across departments or buildings.

-  **Real-Time Platform Monitoring**  
See usage, availability, and exceptions instantly.
-  **Integration with Hospital Systems**  
Connect lockers with access control or clinical workflows.

## Modernize Healthcare Storage and Dispensing

Discover how Keynius helps healthcare organizations manage staff lockers, vending, and dispensing with full control and accountability.
