

Smart Parcel Management Without Bottlenecks

Parcel volumes continue to rise across residential, student housing, and mixed-use buildings. Keynius delivers secure, self-service parcel lockers that streamline delivery and collection, eliminate congestion, and provide 24/7 access without staff involvement.

Pick-Up and Drop-Off, Simplified

Streamlining Package Delivery for Student Housing

How student housing streamlined package delivery with smart lockers for faster pickup and less staff load.

🇨🇭 SWITZERLAND

Modern buildings receive a constant flow of parcels from multiple couriers, often outside standard office hours. This often relies on reception desks, storage rooms, or manual handovers, creating clutter, missed deliveries, limited pickup windows, and increased pressure on staff or building management.

As delivery volumes grow, these inefficiencies escalate. Parcels pile up, residents queue to collect items, staff spend time coordinating handovers, and security risks arise when packages are left unattended or misplaced.

Keynius replaces manual parcel handling with smart pick-up and drop-off lockers. Couriers deposit parcels securely, recipients collect them independently using QR or mobile access, and all activity is managed centrally through a digital platform.

The result is a secure, scalable parcel solution that reduces congestion, improves user satisfaction, and operates reliably without daily management effort.

24/7 Self-Service Parcel Lockers

Enable residents, students, or employees to collect parcels at any time without relying on staffed reception or limited pickup hours.

Any Courier, One System

All delivery services can use the same locker infrastructure without coordination.

QR & Mobile Pickup Access

Recipients retrieve parcels securely using personal digital access codes.

Reduced Congestion and Admin Load

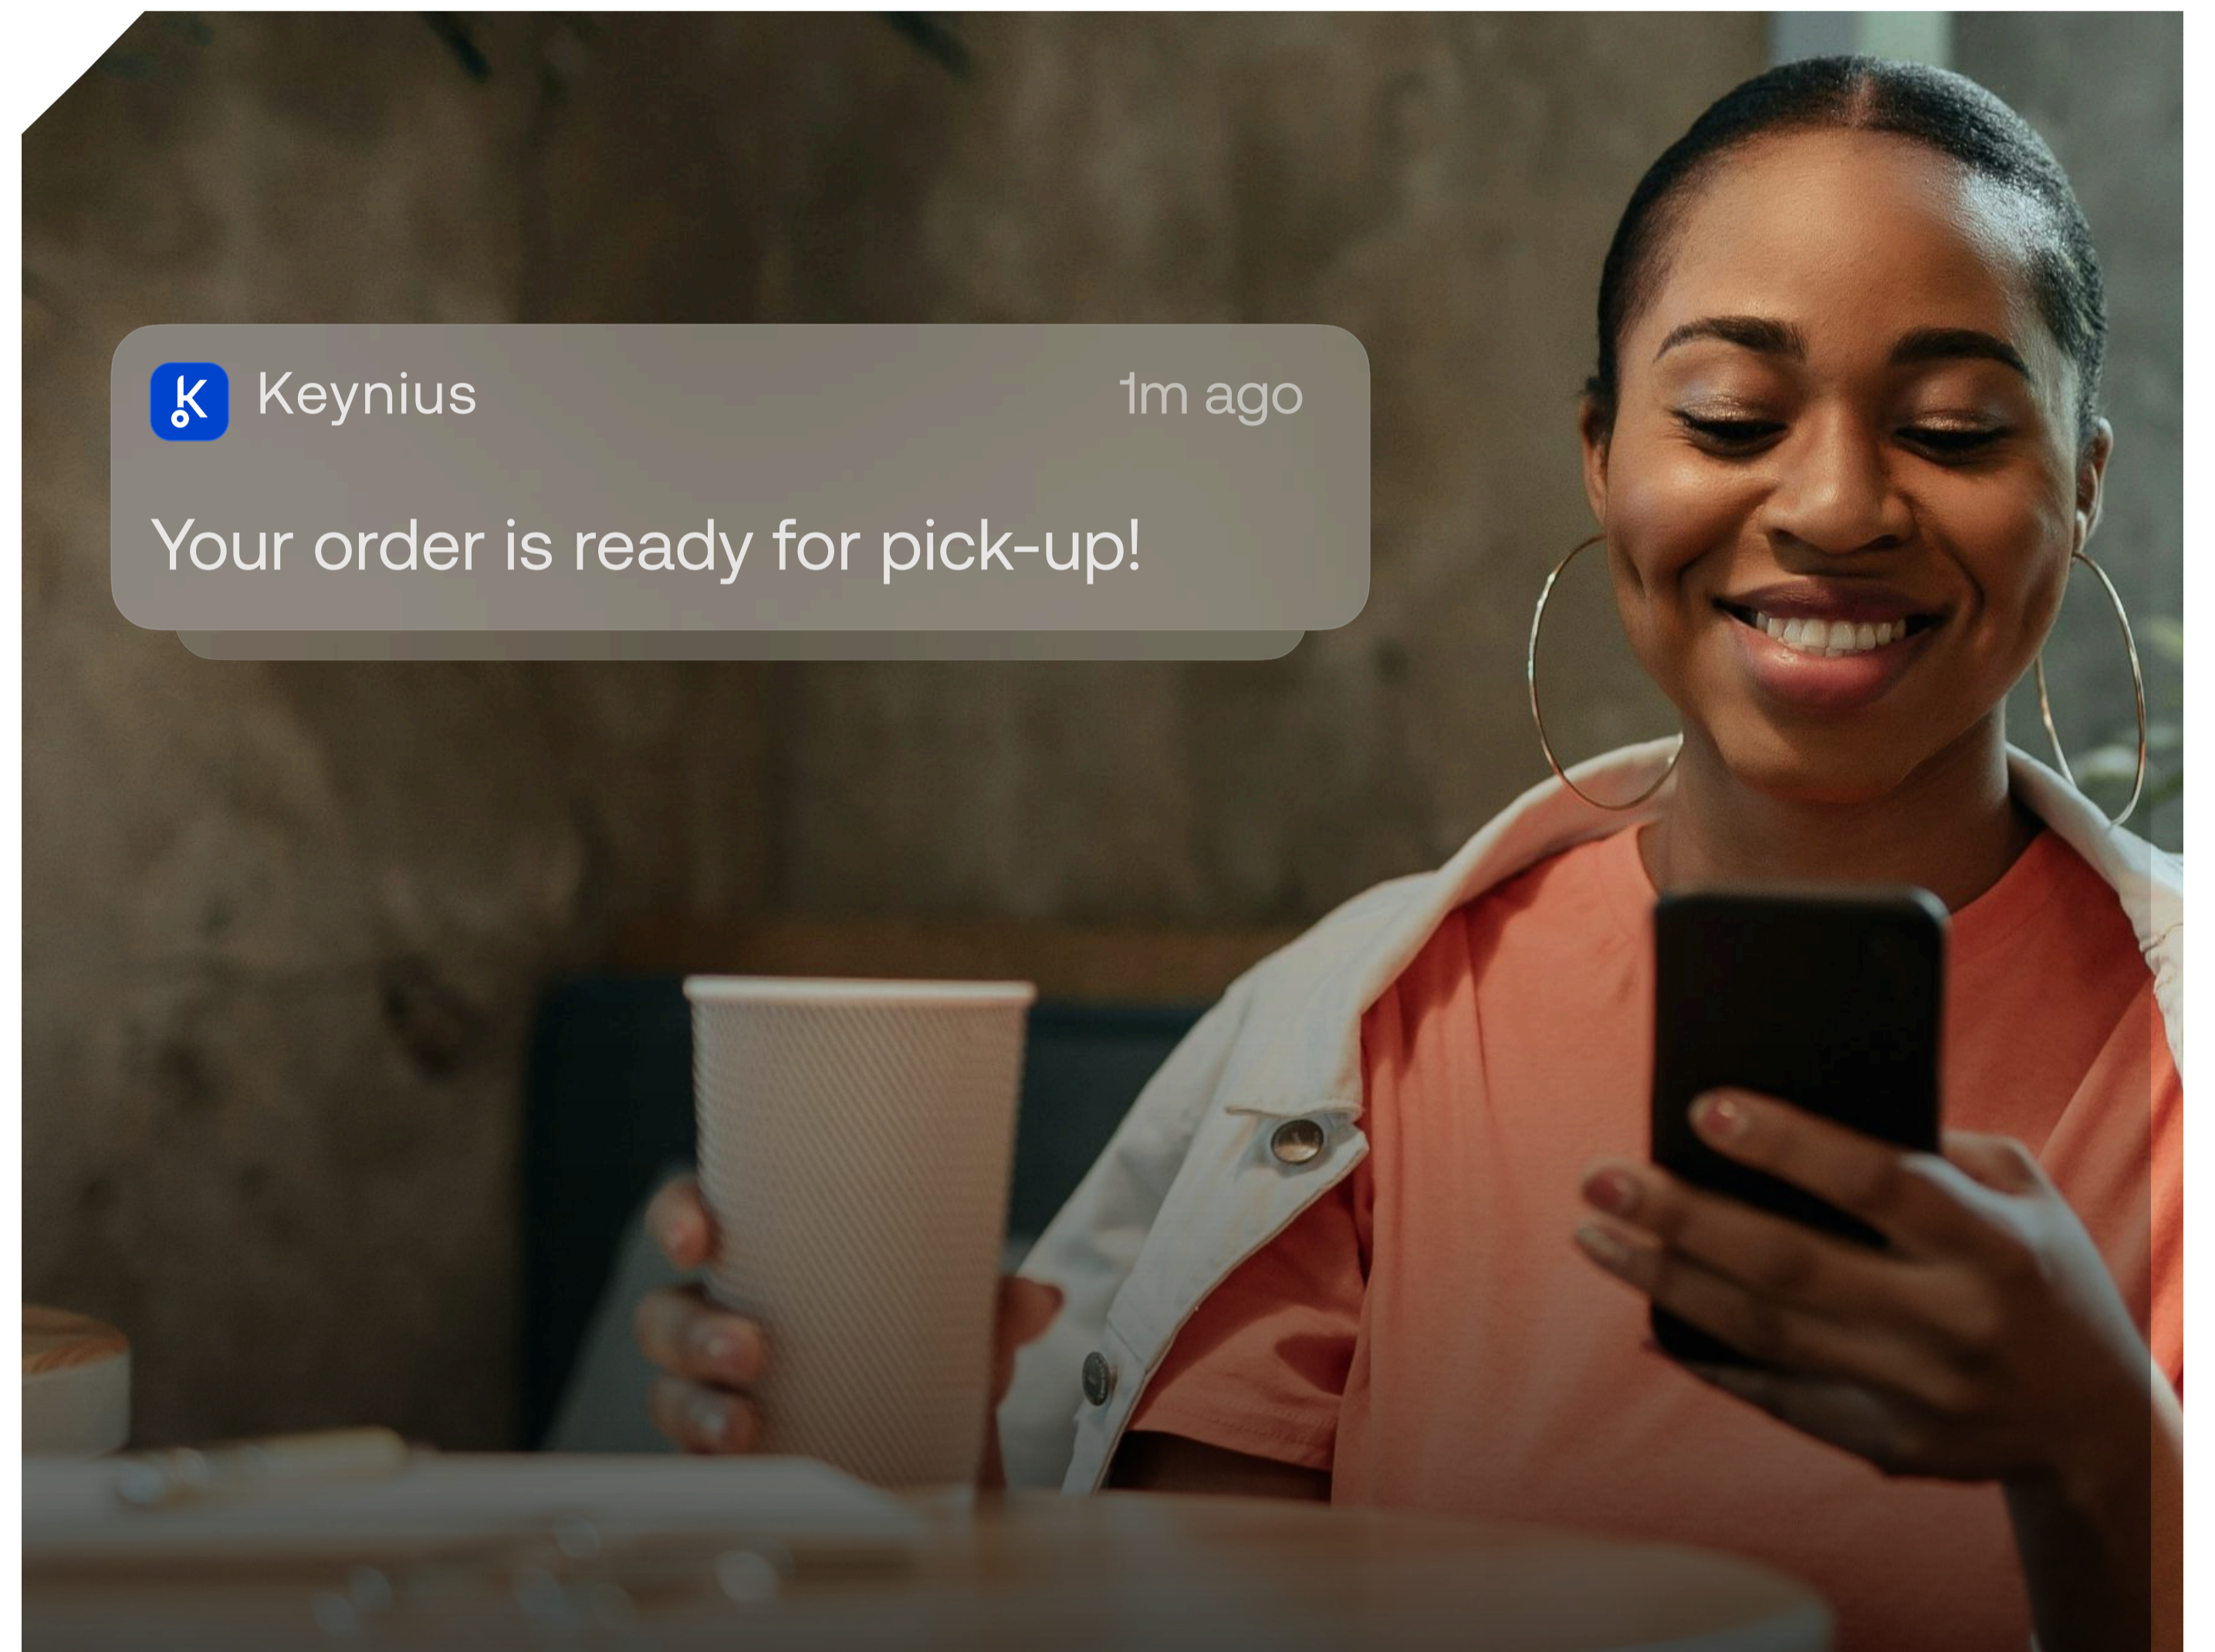

Remove parcel queues and manual handovers by automating delivery and collection through centralized locker walls.

Automatic Notifications

Users receive instant email or SMS alerts when parcels arrive.

Centralized Locker Management

Administrators monitor usage and availability in real time.

Secure and Space-Efficient Storage

Consolidate parcel storage into compact locker systems that improve security while freeing up valuable floor space.

Indoor and Outdoor Deployment

Locker walls operate reliably in indoor or outdoor environments.

Logged and Traceable Handling

Every parcel interaction is recorded for accountability and security.

Simplify Parcel Delivery and Collection

Discover how Keynius helps buildings manage parcels efficiently with secure, self-service pick-up and drop-off.
